

Research Database Application

ReDA is a flexible, secure and reliable web-based research management system. Over the last 10 years, ReDA has been implemented across hundreds of organisations from individual hospitals and universities to national networks.

Key Benefits

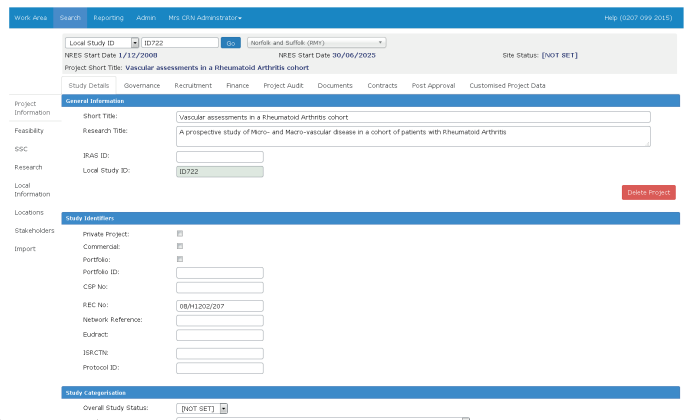

- **Integration:** Save administration time and reduce human error by importing directly from IRAS, the UKCRN dataset or ODS site codes
- **Easy access:** From any web browser on a PC, tablet or mobile device
- **Centralised information:** Manage all your studies, sites, investigators and patients from one system
- **Comprehensive reporting:** ReDA has been designed to satisfy the UK information gathering and reporting requirements
- **Monitor governance and recruitment targets:** Log study set up and patient recruitment, and track progress against government targets
- **Electronic document storage:** Upload files against studies, investigators or patients
- **Customisable:** Adapt the system to your requirements without the need for additional development work

Easy navigation throughout the system

The screenshot shows the top navigation bar with 'Work Area', 'Search', 'Reporting', 'Admin', and 'Mrs. CRN Administrator'. Below this, the 'Work Area' section is divided into three main categories: 'Overview' (Project Reminders, Alerts, Post Approval), 'Studies' (New Study, ReDA Study Search, CRN Search, ERM Import Search), and 'Management' (SOP Store, Contacts, Recruitment).

Study information logically organised and easily accessible

The screenshot displays a detailed view of a study. It includes a header with 'Local Study ID: ID722', 'NRES Start Date: 1/12/2008', and 'Project Short Title: Vascular assessments in a Rheumatoid Arthritis cohort'. Below this, there are sections for 'General Information' (Short Title, Research Title, IRAS ID, Local Study ID), 'Study Identifiers' (Private Project, Commercial, Portfolio, CSP No, REC No, Network Reference, Eudract, ISRCTN, Protocol ID), and 'Study Categorisation' (Overall Study Status: [NOT SET]).

Infonetica provides a leading range of secure, web-based clinical research solutions within both government and private sectors across local, national and international market.
